

For this task, I want you to use Kibana to visualize the available flights data. Kibana is becoming one of the popular data visualization tools used across organizations. Please create the following using the said tool:

1. Import the given flights data
2. Create a dashboard and display the following:
  - a. Total count of flight records
  - b. Total cancelled flights per month
  - c. Add filters that can be useful to filter out the data
  - d. Tag cloud of top 50 destinations
  - e. Tag cloud of top 50 origins
3. Analyze further the given data and add more panels based on your exploration.
4. Capture screenshots of the panels.
5. Create a document and paste the screenshots of your panels.
6. Provide clear and concise summaries for each panel you created.
